

METAFLORA

KOL DECK

What is MetaFlora?

We are a BioTech DePIN and knowledge hub ecosystem preventing false labeling and claims to verify plants' genetic with 99.9% accuracy.

With the power of data, a decentralized workload, and a Certified Genetic Verification Protocol, MetaFlora will provide an environment to innovate the agricultural industry.

Cultivators, industry experts, commercial farms, medical researchers, therapists and retail customers will use MetaFlora's Decentralized Physical Infrastructure Network (DePIN).

Project Goals

Using patented applications, farmers, experts, and cultivators can scan plants and record their DNA on the [GalaChain](#). MetaFlora is currently in development within the cannabis industry.

From verifying genetic & product data to preserving genetic lineages, MetaFlora brings transparency and innovation to the agricultural sector.

The solution incorporates NFC scannable labels, on-chain verification, databases of agricultural knowledge and other tools into a decentralized ecosystem powered by thousands of nodes.

Find more information in the [Node Network paper](#).

Strong points

There's no quality standardization in the cannabis market, but MetaFlora's solution can fix that.

Retail & professional gets cannabis products with COA validation (Certificate of Analysis) from independent laboratories.

Our patented technology allows laboratories to give their clients DNA thumb-printed verification on every product label. This benefits academics researchers, physicians in the medical field, and consumers.

The founder is a cannabis expert and well established in the cannabis industry.

Excellent tokenomics, referral system and attractive reward incentives for node operators.

Building on a newly released TypeScript-based fastest L1 blockchain.

What we sell

Powered by  GALA

We plan to sell 3 different Nodes. We are currently in Phase 1 of our first Node Connoisseur.

Connoisseur Nodes

Designed for cannabis connoisseurs & Web3 enthusiasts. This tier receives exclusive rewards for processing and transferring data in several ways within the MetaFlora ecosystem and processing ecosystem transactions.

Commercial Farm Nodes

Made for commercial farms and large-scale cultivation operations. This tier provides advanced features and capabilities tailored to commercial growers' needs.

Home Grower Nodes

This tier is for individual home growers and small-scale cultivation enthusiasts. A user-friendly and accessible solution for home growers to connect their growing environments to the platform and elevate their results.

Referral system

Everyone can join a mutually beneficial partnership with our referral system.

- 1) Go to this website.
- 2) Register your account.
- 3) Generate a referral link.
- 4) Get reward distribution to your connected wallet.

You will receive a 10% referral reward immediately after your friend purchases Connoisseur Node. With more referred purchases, you can increase your referral tier and **earn even more %**.

The referral program will be available in Phase 1 in from April 2024. [Read more information HERE.](#)

Basic Tokenomics

Team	7 %	70 000 000
Operation & Development	12 %	120 000 000
Marketing	6 %	60 000 000
DEX Pool	2,5 %	25 000 000
Treasury	15 %	150 000 000
Connoisseurs Nodes	19 %	190 000 000
Home Grower Nodes	4 %	40 000 000
Gala Founders Nodes	2 %	20 000 000
Actions & Scanning	12 %	120 000 000
On-chain Asset Holders	12 %	120 000 000
Contributors Rewards	5 %	50 000 000
Genetic Lineage Reward	3 %	30 000 000
Donations	0,5 %	5 000 000
Total	100 %	1 000 000 000

Daily Distribution & Halving Schedule		
Tranches (years)	Released Supply (cumulative)	Daily Node Emission
1st	500,000,000	1,369,863
2nd	250,000,000	684,932
3rd	125,000,000	342,466
4th	62,500,000	171,233
5th	31,250,000	85,616
6th	15,625,000	42,808
7th	7,812,500	21,404
8th	3,906,250	10,702
9th	1,953,125	5,351
10th	976,562	2,676

*The token allocation and release rate are subject to change.

Token release is planned to decrease progressively over time. Not every year, but very close to this time in the form of halving based on **Cumulative Circulating Supply**. Ensuring a smooth transition from rapid expansion to sustainable development.

For each ecosystem participant, the Adjustable Minting Rate can be reviewed periodically (e.g., annually or biannually) based on ecosystem health, token price stability, and contribution levels.

For this reason, there is a Treasury which accumulates \$OG tokens and has its own Adjustable Mint Allowance Pool. Through this mechanism, MetaFlora will be able to ensure a certain level of flexibility and reaction time for upcoming challenges or for additional support for its community or MetaFlora Node operators. Roadmap

2024
Q1 - Q2

Nodes & Genetics

- Initial Connoisseur Node sale and building licensed industry partnerships.
- Laying the foundation for the creation of the first Genetic Data (Artifacts).

Genetic Data Library

- Release the first Genesis Connoisseur Box, featuring products derived from the genetic data library.
- Launch Connoisseur Node Network and enable participation in genetic data library.

2024
Q3 - Q4

DNA Repository Platform on Galachain

- Master Grower and Industry Nodes run our patented Certified Genetic Verification (CGV) protocol.
- Connoisseur Nodes routes the DNA ThumbPrints to the consumers, enriching the platform's repositories.

Industry Node Operation & Expansion

- Extend a reach of MetaFlora's data repositories with suitable companies and establishing industry nodes operations.
- Continue to refine and enhance the platform's functionality based on user feedback and evolving industry standards.

2025

Cross-Platform Interface & Headquarters

- Improving cross-platform seamless UI/UX.
- Opening the MetaFlora Headquarters.
- More innovation, new partnerships, and expand the MetaFlora ecosystem.
